AIRBAND REMOTE DATA PROTECTION

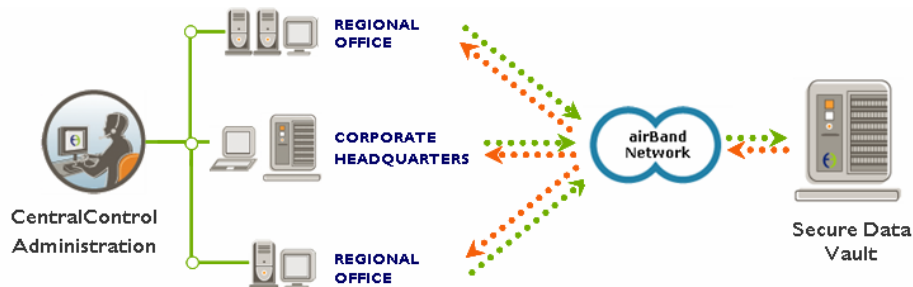

POWERED BY  EVAULT

The Solution that Makes Secure Backup and Recovery a Reality for Enterprises

airBand Remote Data Protection backs up an entire organization's mission-critical data to a Tier I data center – with no capital investment and a minimal amount of ongoing maintenance. Safe, secure, and off-site, the encrypted data is available online at all times for immediate, point-and-click recovery. The service is delivered via airBand's best-in-class wireless network with a single point of contact and 24x7 customer support to ensure a seamless solution that's there when you need it.

Key Benefits:

- Instant, off-site backup
- Fully automated
- No capital investment
- Rapid recovery 24x7
- Server and desktop support
- Central control for all locations
- Comprehensive reporting
- "Fast Lane" bandwidth on demand

“Some 70% of businesses fail within a year following a major IT disaster, if they do not have a valid recovery plan in place.”

Gartner Group, 2003

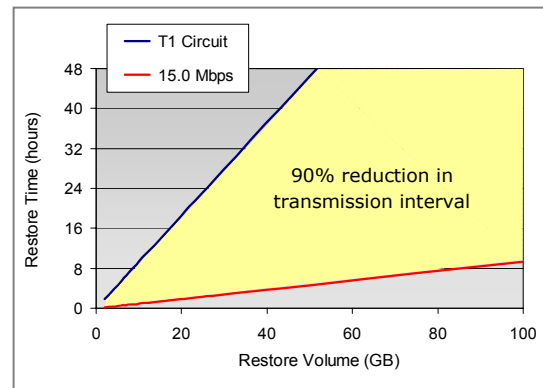

How airBand Remote Data Protection Works

- **Quick and Painless Installation** - With phone support, your system administrator installs the client software on each server or desktop requiring backup, and then sets the ongoing retention schedule.
- **Automatic Protection** - It's that simple. In a matter of minutes, your organization is now operating a completely automated, reliable and secure data protection and recovery strategy.
- **Faster Backup and Recovery** – airBand minimizes online backup and recovery intervals with airBand's wireless service delivery and exclusive "Fast Lane" bandwidth-on-demand, where airBand instantly **doubles** the available bandwidth up to 15 Mbps for quick, seamless data restores in a matter of minutes.

Instant Off-Site Backup and Restore Utilizing airBand “Fast Lane” Bandwidth-on-Demand

- **Double Your Bandwidth** - With a single phone call we will immediately double your bandwidth for on-the-spot restores so you can get back to business as quickly as possible.
- **Need More?** – We’ve got it. Our wireless network provides unparalleled flexibility – upgrade your available burst rate to 15 Mbps or more, available at a moment’s notice in case of a disaster.

Feature	Business Benefit
Automated, disk-to-disk process	Eliminates tape media management and optimizes backup and recovery processes, reducing manual handling and possible errors
Fast Lane Bandwidth-on-Demand	Doubles your bandwidth – instantly – for minimized seed and restore intervals
End-to-end encryption	Secures your data in transit and while in storage on the vault with AES encryption to ensure security of your sensitive data
Centralized Management	Manages the backup and restore process of multiple server environments from one location – local or remote
Comprehensive Reporting	Provides backup status, storage levels, and environmental information of both local and remote environments
Delta Processing	Sends only changed data blocks in new or changed files, resulting in significantly faster backup times and less back-end storage consumption
Optimized Exchange Backups	Provides mailbox-level backups and restores using Exchange MAPI client
Application Integration	Enables seamless interoperability with business applications such as Exchange, SQL Server, Microsoft Cluster Services, and Oracle
Industry-leading OS Support	Protects multiple platforms and applications, including Windows, NetWare, Linux, Solaris, HP-UX, IBM AIX, Unix and IBM iSeries
